Tips for Success in Basic EMT

The goal of this class is to produce the most outstanding EMT's in Tennessee. To help in that goal, some tips for being successful are listed below:

- Attend every class and be present on-time.

- Always study your assignment before coming to class. Plan to spend at least two hours of time outside of class for every hour spent in class.

- Print the lecture outline for each class. That way, you won't be preoccupied with intensive note-taking during lecture and you will only have to take clarifying notes during class.

- Participate in a study group for examination preparation. However, keep in mind that it is worse to belong to a non-productive group than it is to study alone.

- Focus first on lecture notes and then the textbook during examination preparation.

- There are practice exam questions on the website supporting your textbook. Use them.
